

Insure your test site is making **ACCURATE** measurements **Daily!**

Antennas/Baluns/  
Cable/Receivers can  
all develop problems  
that may go  
unnoticed, requiring  
expensive and time  
consuming re-  
testing. AET's USDS  
is **easy-to-use** and  
battery isolated,

with the antenna being an integral part of the system. The USDS is also useful to evaluate RF shielding effectiveness of small size enclosures and eliminates the problem of cable feed through. Users can test in either horizontal or vertical polarization as well as test Quasi-Peak detectors and Peak detectors separately.
