

Nemko Direct for Telecom News

MARCH 2014 / ISSUE NO. 3

Regulatory news for Telecom from around the world

CHINA ISSUES RF MODULE REGULATION

SRRC type approval is now required for RF modules with a wireless transmit function. Two types of modular approval are defined: Full RF-Module and Limited RF-Module.

A full RF-Module must; 1) have data input buffering on the module, 2) have a metal shield to completely cover the RF circuit, 3) have a permanently attached antenna or an antenna with a special connector, and 4) have voltage limiting and noise filtering in the power supply circuit of the RF module.

A limited RF-Module must meet at least three of the four essential requirements listed above for Full RF-Module.

The module must contain a label with the CMIIT ID clearly visible on the module board. The final host product must also reference the CMIIT ID for the module on the final product or in the user manual of the final product.

The label for a Limited RF-Module will be followed with the character "M" at the end of the identifier to denote Limited RF-Module approval.

BOTSWANA BTA NAME CHANGE

The Botswana Telecommunications Authority (BTA) has changed the name of its organization to Botswana Communications Regulatory Authority (BOCRA).

ALGERIA ISSUING TELECOM APPROVAL CERTIFICATES

Autorité de Régulation de la Poste et des Télécommunications (ARPT) has reorganized and is issuing type approval certificates according to Decision

No. 12/SP/PC/ARPT of 30/01/2013 on the approval of telecommunications terminal equipment and radio installations procedure.
