

STATEMENT OF CAPABILITIES

GENISCO FILTER™
always on.™

*always on.*TM

When we say that Genisco is always on, it's more than just a catch-phrase. It's the way we run our business.

Matthew Heida, Sales Engineer

Debbie Sandvig, Operations Manager

We're the power filter people.

For more than half a century, the best people in the world have been designing and manufacturing the best EMI/RFI filters in the world. Genisco filters have always been made in America, and filters are all we do.

Some of the top names in industry, government, military, aerospace, and research have been trusting our filter products for decades. We'd like to earn your trust, too.

Capabilities

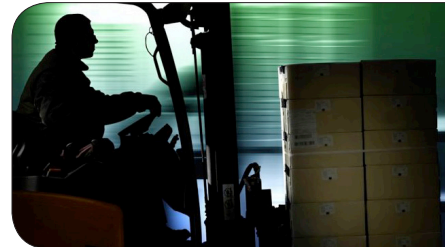

We get it.

Whether you're a computer peripheral manufacturer, a government agency, a military or aerospace contractor, or even an electrical contractor or shielded room supplier, we've already served some of the largest -- and smallest -- names in your industry. Which means we know how to serve you too.

Shortest lead times in the industry.

We're not a big-box manufacturer. Our staff is small, our processes are efficient, and our products are made in America. All of that makes us more nimble than most, so most times we can deliver your order in a fraction of the time you'd expect from anyone else.

The best filters in the business.

Of course we're ISO9001:2008 certified. And of course our incoming, in-process, and final MIL-I-45208A inspection system ensure that your filter will work the first time, and for a long time. But beyond that, our staff has a personal stake in your order, and we take pride in taking care of every detail.

Our Products

When we say we make the best filters in the business, we mean it.

- Field-proven, ISO9001:2008 certified, and built in America to your specifications, with options that include surge suppressors (MOVs), legs, custom paint colors, and more.
- Power indicator lights on select filters let you know they're powered up and working hard.
- Industry-best components ensure the Gensico quality we're known for.
- Customized crating keeps your components secure through shipping and delivery.

Communications Filters

Our low-pass Electromagnetic Interference and Radio Frequency Interference filters (EMI & RFI) are designed to block high-frequency noise that interferes with the operation of sensitive electrical equipment.

These high performance dual circuit filters are available for both DC and AC applications including:

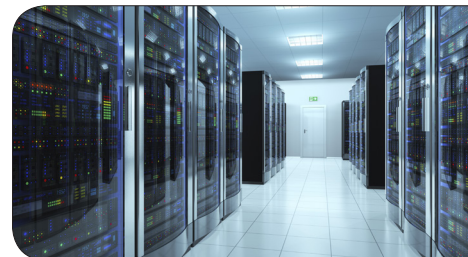

- Telephone
- P.A. System
- Fire Alarm
- Relay/Thermostat
- General Communication
- Data

MOVs and Indicator Lights

Custom Crating

Power Line Filters

EMI/RFI facility power line filters are used to block unwanted signals and remove interference from entering or exiting through your power lines. They protect and facilitate power and secure communications for shielded rooms and buildings.

Power Line Filter Panels

EMI/RFI power line filter panels are used in government and commercial installations to prevent unwanted signals and interference on power lines. High performance filters are specified to 100 dB. Standard filters are specified to 60dB and feature a reduced enclosure size for easier installation in constrained areas.

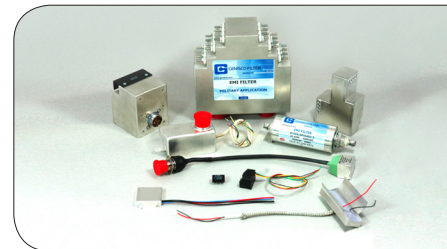

Power Defense Filters

Power Defense is a new line of automation/electronic equipment filters engineered to protect sensitive electronic equipment from current and voltage spikes, unwanted signals, and interference. These filters are your first line of defense against the damaging effects of dirty power on sensitive electronics.

Custom Filters

Your project isn't off-the-shelf? No problem. Genisco has the expertise to listen to your needs, then customize any of our filters to your exact specifications -- and deliver them with the same timeliness and quality that Genisco is famous for.

How can we help?

Wherever you are, we're here and ready to help you any way we can.
