

Is Your Data Center Protected?

With the proliferation of electronics and “connectivity” in today’s world, it is ever more important to protect information from electromagnetic hazards. The potential problems can be typical electromagnetic interference from cell phones, electrical mains, etc. But also the electromagnetic threats can be intentional – from eaves-dropping to electromagnetic pulses that can distort data. Thus, it is important to “shield” the data from these issues. Not only does it mitigate the financial hardships that can occur, it also can help you comply with the growing governmental regulations.

MVG

can help keep the data safe and shield the data center by providing shielded enclosures customized to fit your needs. The **MVG Shielded Rooms** provide high-performance shielding protection to keep data safe from leaked information, distortion, or high energy pulses. MVG has extensive experience in designing, manufacturing and installing shielded rooms around the world.

MVG will work to develop
the best solution for your Data Center protection needs!
